Subject:

rush search for 09/648,310

Please approve rush searh. The case is due this bi-week.

Please search SEQ ID NO:1 and 2.

BioTech-Chem Library Search Results Feedback Form (Optional)

The search results generated for your recent request are attached. If you have any questions or comments (compliments or complaints) about the scope or the results of the search, please contact the BioTech-Chem searcher who conducted the search or contact:

Mary Hale, Supervisor, 308-4258 CM-1 Room 1E01

Volu	ntary Results Feedback Form
>	I am an examiner in Workgroup: (Example: 1610)
>	Relevant prior art found, search results used as follows:
	102 rejection
	103 rejection
•	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Search results were not useful in determining patentability or understanding the invention.
Other	· Comments:

Drop off completed forms at the Circulation Desk CM-1, or send to Mary Hale, CM1-1E01 or mary.hale@uspto.gov

Sequence 2020, Application US/09294093B

Patent No. US20010051335A1

GENERAL INFORMATION:
APPLICANT: Lalgudi, Raghunath, V.
APPLICANT: Sherman, Bradley, K.
TILLE OF INVENTION: POLYNUCLEOTIDES AND POLYPEPTIDES DERIVED FROM CORN TASSEL
FILE REFERENCE: PL-0009 US
CURRENT FILING DATE: 1999-04-16
PRIOR PILING DATE: 1999-04-16
PRIOR FILING DATE: April 21, 1998
NUMBER OF SEQ ID NOS: 6207
SEQ ID NO 2020
LENGTH: 268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4150, Application US/09294093B

                                                     rat or human progression Suppressed Gene 13 (PSGen 13) protein. The nucleic acids are useful for preventing the growth of cancer cells and/or new blood vessels, and for treating patients suffering from a cancer, e.g. nasopharyngeal tumour, thyroid tumour, leukaemia, lymphoma, or cancer of the breast, lung, prostate, ovary or colon. PSGen 13 may also he used to suppress the transformed phenotype of a malignant cell. Administration of PSGen 13 gene or protein may result in a decrease in tumour mass, number of cancer cells, serum tumour marker, tumour mass, number of partient serum tumour marker, tumour improved clinical symptoms, and/or increased patient survival. The present sequence represents the amino acid sequence of rat Progression

new blood vessels, and for treating patients suffering from a cancer, e.g. nasopharyngeal tumour, thyroid tumour, leukaemia, lymphoma, or cancer of the breast, lung, prostate, ovary or colon. PsGen 13 may also be used to suppress the transformed phenotype of a malignant cell. Administration of PsGen 13 gene or protein may result in a decrease in tumour mass, number of cancer cells, serum tumour marker, tumour metastasis, vascularisation, perfusion, or rate of tumour growth, improved clinical symptoms, and/or increased patient survival. The present sequence represents the maino acid sequence of human Progression Suppressed Gene 13 (HupsGen 13).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen

polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the isolation of genes AAC66410-C66458 encoding the human secreted proteins AAB32002-B32050. This sequence represents a fragment of the protein encoded by the gene given in the descriptor line. The sequence is used as a query sequence for doing BLASTX searches to determine homologous sequence to the protein. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer,

This sequence represents a peptide fragment homologous to the protein encoded by the gene given in the descriptor line. The sequence is a search result from a BLASTX homology search. The genes and proteins are useful for preventing, amedical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease,

This is the amino acid sequence of the PSGen13 protein (progression suppressed gene 13). PSGen13 has suppressed expression in progressed tumour cells. The PSGen13 nucleic acids sequence was identified using new tethods for identifying nucleic acids differentially expressed between two samples. The method involves performing reciprocal subtraction two samples. The method involves performing reciprocal subtraction samples. The subtraction samples are amplified and compared to identify those nucleic acids that are differentially expressed. The subtraction samples are amplified and compared to identify those with increased or reduced expression during tumour cell progression, e.g. progression suppressed genes (PSGen) and cell progression e.g. progression alterated genes (PSGen). The method reduces the complexity of the band pattern produced in conventional differential RNA display (where bands may be obscured, resulting in false positive signals) since most bands common to both samples are eliminated, allowing identification and coloning of genes displaying anticipated differential expression. RSDD requires only a single anchored primer for amplification and reamplified conn be analysed by reverse Northern blotting.

Novel human diagnostic protein #27986.

18-FEB-2002 (first entry)

ABG27995;

ABG27995 standard; Protein; 456 AA.

RESULT 11 ABG27995

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

biodiversity

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colyperase chair reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The coloridates are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques of restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II). (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. (I polypeptide and polynucleotide sequences have applications in classocial subspectives. Abg00010-Abg30377 represent of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conding and ordisequences as abg00010-Abg30377 represent novel human cut sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO contribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23 DGKLSVKFGVLFQDDRCANLFEALVGTLKAAKRRKIVTYAGELLLQGVHDDVDIVLLQ

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention i useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176 ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Microbial infection; antibacterial; Helicobacter pylori infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention is insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL015176-ABL30511), expressed DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64

    This invention describes a novel preparation of an agent (A) for detection, prevention and/or treatment of microbial infection by:

(d) identifying essential genes (I) and corresponding polypeptides

(II); (ii) identifying compounds that are directed against (II) and inactivate the microbe; (iii) testing these for suitability for use; and care directed against (II) and inactivate the microbe; (iii) testing these for suitability for use; and care of gene-deficient microorganisms by conditional antisense inhibition (CAI) and/or subtractive recombination mutagenesis (SRM).

The products of the invention have antibacterial activity. (A) (which may be a nucleic acid (Ia), vector or host cell containing (Ia), derived be a nucleic acid (Ia), vector or host cell containing (Ia), derived compared or inhibitor of (IIa) are particularly used for diagnosis, creatment or prevention of infection by Helicobacter pylori. Particularly contained or prevention of infection by Helicobacter pylori. Particularly contenting species, so identified (Ia) should have a broad spectrum of activity. Many gene-deficient cells can be screened quickly, in an automated process, and the identified genes can be used for screening without purification.
                                                                                                                        Preparing an agent for diagnosis or control of microbial infection, useful particularly against Helicobacter, based on identification of essential genes in defective mutants -

Cytoskeleton associated protein; CYSKP-3; cancer; proliferative; autoimmunity; inflammatory, vesicle trafficking; neurological; cardiovascular; cell motility; reproductive; muscle disorder. Human cytoskeleton associated protein 3 (CYSKP-3). "ankyrin repeat" Location/Qualiflers AAY91948 standard; Protein; 324 19-JUL-2000 (first entry) 'note= Homo sapiens AAY91948; Domain RESULT 15 AAY91948 ID AAY9

```
AAY91946-61 show human cytoskeleton associated proteins 1 to 16 (CYSKP-16 CYSKP-16) respectively. The sequences can be used to treat and diagnose cancer and cell proliferative, autoimmune/inflammatory, vesicle trafficking, neurological, cardiovascular, cell motility, reproductive and muscle disorders. Pharmaceutical compositions containing CYSKP-2 to CYSKP-16 can be used to treat or prevent disorders associated with decreased expression or activity of CYSKP (claimed), for example, atherosclerosis, cirrhosis, hepatitis, myelofibrosis, psoriasis, cancers, autoimmune/antinflammatory disorders such as allergies, anemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human cytoskeleton associated proteins, used to treat cell proliferative, autoimmune/inflammatory, vesicle trafficking, neurological, cell motility, reproductive and muscle disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Corley NC;

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

OVDE: This is a "vorking draft' sequence. It currently
consists of 44 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                       ' NOTE: Estimated insert size may differ from sequence length
                                                                                                                                                                                                                 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     86896
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     99361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        86696
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        99461
           Morley, K.C. Direct Submission Submitted (25-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
                                                                                                                                                                                                                                                                                                                                                                             (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 70 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                          NOTE: Estimated insert size may differ from sequence length
                                                                                                                                                                                                                                                                                                                                                                                                                                        arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 108 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                     bp in length

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
